EDUCATION

Carleton University

Ottawa, ON

*Bachelor of Engineering (B.Eng.), Computer Systems Engineering, Third-Year Standing**Expected May 2027***Relevant Coursework:** Operating Systems, Computer Networks, Data Structures & Algorithms, OOP, Embedded Systems

TECHNICAL SKILLS

Languages: C, C++, Golang, Java, JavaScript, Python, Ruby, Rust, SQL, TypeScript**Frameworks:** FastAPI, Flask, Next.js, Node.js, React.js, ROS2, Ruby on Rails, Scikit-learn, Tailwind CSS**Developer Tools:** AWS, Bash, Docker, GCP, Git, GitHub, GitLab, Grafana, Jenkins, Jira, Linux, pytest, QNX, Vim

RELEVANT EXPERIENCE

Synopsys | *Python, FastAPI, Pydantic, pytest*

Remote

*Software Development Intern**May 2026 – Aug 2026*

Shopify CLI (OSS) | *TypeScript, Ruby, oclif, Node.js, GitHub Actions*

Remote

*Open-Source Contributor**November 2025 – Present*

- Built `config:pull` to detect `shopify.project.toml` and skip redundant prompts, reducing manual setup for CLI users.
- Standardized config validation across core commands to prevent inconsistent state and avoid common config-related failures.
- Refactored shared configuration modules to unify core logic, reducing duplication and long-term maintenance overhead.

Autonomous Robotics Carleton | *ROS2, Python, C++, Linux*

Ottawa, ON

*Software Development Lead: Systems & Tooling**July 2025 – Present*

- Led ROS2 data pipelines for perception and navigation, reducing inter-process latency across the autonomy stack.
- Established Docker-based CI and enforced code reviews, approving contributor PRs to maintain stability as the codebase scaled.
- Defined contribution standards and maintained centralized docs to onboard and support **20+** new contributors effectively.

CuHacking | *Payload CMS, React, TypeScript, Node.js, REST APIs*

Ottawa, ON

*Full Stack Developer: Website, Dev-Docs, Portal**September 2024 – May 2025*

- Engineered a developer portal for **400+ attendees** using modular React, ensuring reliability during live events at scale.
- Refactored frontend using shared UI primitives, a centralized design system, and custom React hooks to reduce duplication.
- Automated content pipelines via Payload CMS and Linux shell scripts, eliminating JSON editing for non-technical organizers.

IEEE SPAC | *React, TypeScript, Figma, UI/UX*

Ottawa, ON

*Full Stack Developer & UI/UX Designer**July 2025 – October 2025*

- Redesigned responsive UI components compliant with WCAG standards, improving accessibility and cross-device usability.
- Translated Figma mockups into production React interfaces, ensuring consistent and accessible user-facing workflows.
- Built onboarding and submission workflows that reduced failed submissions for candidates and sponsors significantly.

Environmental Health and Safety, Carleton University | *CMS, SEO, Web Performance*

Ottawa, ON

*Web Developer**January 2025 – April 2025*

- Redesigned CMS workflows to remove technical dependencies and enable non-technical staff to publish events and updates.
- Restructured site architecture and SEO to improve content discoverability while reducing page load times across the site.
- Implemented modular JavaScript components to standardize dynamic content rendering and enable reusable site features.

PERSONAL PROJECTS

Nightwatch: Safe Nighttime Routing (Top 5 – CUMSA Hacks) | *Python, FastAPI, Pydantic, pytest*

January 2026

- Built a FastAPI backend to compute safest vs shortest routes by scoring paths using streetlight density from Ottawa Open Data.
- Designed Pydantic schemas with nested models and validation to enforce strict API contracts and prevent malformed requests.
- Implemented pytest integration tests using FastAPI TestClient to validate routing endpoints and schema correctness.

LazyDots | *Golang, Bubbletea, Lipgloss, YAML, Git*

November 2025 – Present

- Built a cross-platform dotfile manager to replace GNU Stow, automating symlinks and Git-backed versioning on Linux and macOS.
- Designed Git-backed versioning with safe rollbacks, building a portable and maintainable system from scratch in Golang.
- Built an interactive Bubbletea TUI for profile management and config switching, improving usability over existing tools.

Homelab Infrastructure | *Cloudflare Tunnels, Docker, Nginx, DNS, Linux*

September 2025

- Deployed a security-first homelab for sensitive data, exposing services only via Cloudflare Tunnels with zero inbound ports.
- Orchestrated containerized services on a Raspberry Pi using Docker to ensure isolation, reproducibility, and controlled access.
- Configured Nginx reverse proxying and local DNS to enable secure internal routing, service discovery, and name resolution.

AI-Powered Router Management (3rd Place – Technata Hacks) | *Python, Flask, Scikit-learn, Pandas*

October 2024

- Built an ML-driven router control system in Flask, reducing power consumption by **~20%** under simulated network workloads.
- Trained and validated models on live telemetry data, improving stability while reducing excess heat and energy waste.
